2009

June 3-5, 2009  
Berkeley, CA

# Body Sensor Networks Conference

Body Sensor Networks (BSN) technology has gained tremendous international interest in recent years from researchers both in academia and industry. With the development of innovative wearable/wireless/implantable biosensors, the applications for BSNs extend from in-vivo monitoring and intervention to everyday healthcare, as well as fitness, sport and security.

## CONFERENCE

This workshop will address the fast-growing BSN research field, and offers participants a unique forum to discuss the key issues and innovative solutions in current BSN research. The conference will feature a number of invited lectures by leading academic researchers and industrial experts and include a showcase and demonstration of healthcare and other technologies.

## Topics of Interest

- Networking, security and wireless communications
- Smart fabrics and wearables
- Lower power electronics, power sources and energy harvesting
- BSN architecture and platforms
- Medical applications
- Sport and leisure applications
- Sensor technology and biocompatibility
- Home monitoring and assisted living applications
